

Offer a food ordering system to your clients

With the help of our ordering system, you can offer your clients an ordering system for their restaurants. They will be able to build their own website or add an ordering widget to an existing one. You will be able to offer them a very advanced mobile application that will help to track the orders and delivery process.

Page builder

Your clients will be able to build their own ordering websites under their logo, name and domain

Mobile apps

Your clients will be able to use mobile apps to receive and processing instant orders. They can use it as a simplified POS system both in reception and kitchen

Delivery types-zones

Your clients can use the system to take orders for delivery, takeaway or table. Clients can create zones on the maps with different delivery pricing and terms

Live tracking

Your clients will be able to use a delivery tracking system. Delivery people will receive orders on their app and you can track the progress on a live map

Multiple locations

Your clients will be able to add several locations and manage them separately. They will get access to branch statistics

Widget

Your clients will be able to add an ordering widget if they already have a website
